

CENTIPEDE IS REVOLUTIONIZING HEALTHCARE.

COLORADO —(BUSINESS WIRE)— WITH HEALTHCARE COSTS CONTINUING TO SPIRAL OUT OF CONTROL, CENTIPEDE ADVANTAGE SOFTWARE IS PROVIDING A SOLUTION BY REVOLUTIONIZING THE HEALTHCARE INDUSTRY WITH ITS PROPRIETARY LOGISTICAL EVALUATION GATHERING SYSTEM (LEGS).

Centipede is the first Web-based application to offer comprehensive patient data evaluation with real-time risk assessments regarding potential disease and pharmacological adverse events.

As a first-of-its-kind tool to help clinicians, Centipede makes patient information and data easy to access and understand. By supporting all formats of medical information, Centipede takes a multifunctional approach to patient evaluation by compiling all medical, pharmaceutical and clinical patient historical information in one place.

This enables medical personnel to better evaluate and diagnose patient illnesses as the tool also provides them with critical information and treatment options to help them in their decision making process. Backed by a powerful data-scrubbing and algorithm engine, Centipede saves time and resources which allow providers to have more time for patient engagement.

Centipede was developed to streamline a provider's workflow and seamlessly integrate patient information from across multiple disciplines including medical and clinical information, both current and historical, pharmacological data and laboratory results. Easy to use and implement, Centipede supports all formats of medical information in addition to satisfying medical exchange policies and is considered by its MD-founders to be the first major step in solving healthcare's inefficiencies.
